

# COLPOFIX

## INDICATION

Prevention and treatment of cervical lesions caused by the Human Papillomavirus, thanks to the control of the physiological conditions of the transformation zone of the cervico-vaginal mucosa.

## DESCRIPTION

Colpofix® is an innovative preparation in terms of its formulation and method of use. It is a gel with thixotropic characteristics which, when dispensed, due to the force of mechanical compression, transforms into a liquid which becomes again in gel after application. Its exclusive and ergonomic applicator allows for uniform and effective distribution of the preparation. mucoadhesive directly, and in depth, on the cervico-vaginal mucosa without subsequent spills.

Colpofix® contains as functional substances: Polycarbophil and Carboxymethyl beta-glucan.

In particular, the mechanisms of action by which Colpofix® is effective for the proposed indications are following:

- Forms a film that protects the cervico-vaginal mucosa from the harmful action of external microbial agents, thanks to its bioadhesive capacity.
- Promotes re-epithelialization and regression of cervical lesions, thanks to the control of physiological conditions in the transformation zone of the cervix through hydration.
- Restores and maintains the vaginal microbiota thanks to the regulation of vaginal pH and the prebiotic effect.

## COMPOSITION

Water, Sorbitol, Carboxymethyl beta-glucan, Cross-linked acrylic polymer (Polycarbophil), Imidazolidinyl urea, Dehydroacetate of sodium.
